

TATA NANO EV

The Tata Nano EV (electric vehicle) is based on the award-winning Tata Nano platform.

Like the Tata Indica Vista EV, the Tata Nano EV too offers the practicality of a real car, compromising nothing in the pursuit of providing environment-friendly personal transportation for the modern consumer. It will seat four individuals comfortably in its spacious interiors, which the Tata Nano is known for. It will have a predicted range of up to 160 km and an acceleration of 0-60 kmph in under 10 seconds.

Tata Motors continues its innovative approach with the Tata Nano EV, using super polymer lithium ion batteries which provide superior energy density to conventional batteries.
